

Brandon Asher Woodward

Reisterstown, MD | 443-862-7644 | brandon790523@gmail.com | <https://brandonwoodward.dev/>

Seeking a full-time role that provides opportunities to tackle complex challenges in software development, full-stack applications, real-time simulation, and/or algorithm design, where my work will generate real-world impact. Eager to accelerate my growth through mentorship and collaboration with experienced developers.

Education

York College of Pennsylvania, York, PA

GPA: 4.0

Bachelor of Science: Computer Science, Math Minor

Expected Graduation Date: 2026

Engineering Work Experience

Full Stack Intern | Courtside Video Entertainment, Philadelphia, PA | Summer 2025-Present

- Independently design and develop a full-stack web app utilizing Django, React, and PostgreSQL, expand a complex relational database, build secure RESTful APIs, and create responsive UIs with Tailwind CSS and React.
- Build an end-to-end testing suite and work iteratively with clients to refine features.
- Gain experience with DevOps practices through experimentation with Docker and AWS, including the setup of a staging EC2 instance, while collaborating with another developer on containerization workflows and creating a CI/CD pipeline.

Engineering Intern (Part-Time, 2 days/week) | Johnson Controls, New Freedom, PA | Spring 2025

- Tested and automated VSD 4506 software for large chiller systems, validating 15 of 26 test cases and collaborating with documentation teams to clarify unclear procedures.
- Developed a LabView-based automated test suite integrating Data Acquisition Devices, Modbus, and RS-232, successfully implementing 15 automated test cases and laid the foundation for a future one-click "Test All" functionality.

Gameplay Programming Intern | Firaxis Games, Sparks, MD | Summer 2024

- Spearheaded the creation of a 3D multiplayer party game with Unreal Engine 5 and C++ with a team of four other interns and successfully presented it to the team leaders and executives of Firaxis Games receiving much merit.
- Adapted to a preexisting codebase to develop new code for an ongoing project.

Projects & Extras

Capstone: RevMetrix | York College of Pennsylvania | Spring 2025-Present

- Lead a 5-person team in the design, development, and expansion of the Ball Spinner Controller, overseeing project direction, task delegation, and the integration of hardware, software, and cloud components.
- Implement arm64 support for the MetaWear library on a RPi5 by compiling and linking 5 repositories whilst procuring a comprehensive guide to replicate the process to enable my teammates to press forward without having to rework the entire application for a 32bit Operating System.
- Configure the MetaMotionS sensor by interpreting its datasheet and documentation to initiate data collection from its 9DOF IMU and handle connections gracefully.
- Integrate full functionality with an API developed by the Cloud Team.
- Coordinate cross-team communication, organize meetings, and manage task progress across all project groups to ensure meeting of milestone deadlines.

High School and Division III College Wrestling | York College of Pennsylvania | 2018-2025 Spring

- Consistently committed to multiple practices a day, raising morale, overall improvement, and serving the community.
